

HOW TO PROPERLY SEAL A ROLL-TOP DRY BAG IN 3 EASY STEPS

- 1** Make sure the stiff sealing strips are wrinkle-free. Close the dry bag so that the sealing strips are pressed together.
- 2** While holding the strips together, push down to force out trapped air. Once air has been removed, tightly fold the top over several times. We recommend a minimum of 3 folds or "rolls" to properly seal a roll-top dry bag.
- 3** Connect the buckle in the direction opposite to the direction the material was folded. Once the buckle has been connected, the sealing strip at the top of the bag can also serve as a handle to lift the loaded laundry bag.
